FOR CORPORATE CAMPUSES

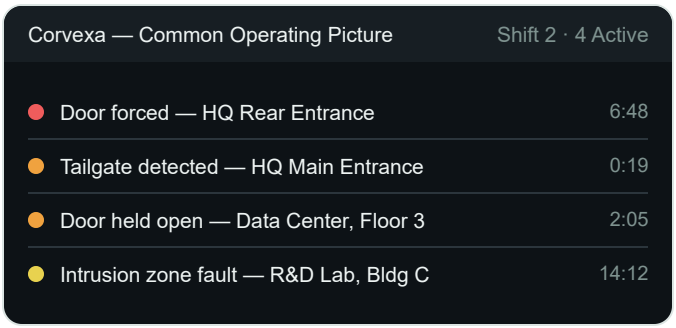

One picture. Every building. Every badge, camera, and alarm working together.

Corvexa correlates video, access control, intrusion, and life-safety systems across every building on your campus — or every site in your portfolio — into a single real-time operating picture, with the right response procedure attached automatically.

Why enterprise security teams need this

Every acquisition, every new building, and every facilities vendor adds another disconnected system. Your security operations center ends up watching a wall of consoles instead of one operating picture — and inconsistent response becomes a brand and business-continuity risk.

- One operating picture across every building, site, and acquired company — not a console per property
- Forced doors and tailgating correlated with camera activity, and held-open doors classified by time of day, automatically
- The same response procedure every time, whether it's headquarters or a satellite office
- A complete, exportable audit trail for security leadership, HR, and board-level reporting

Built for enterprise campus operations

The same seven-capability platform, focused on what running a multi-building campus — or a multi-site portfolio — actually requires.

Correlation & Classification

Badge, alarm, and camera events fused into one incident across any building — severity assigned automatically.

SOP Workflow Engine

The same response procedure every time — whether it's headquarters or a satellite office.

Unified Console

One security-operations-center queue for your entire portfolio — no more acquired-system sprawl.

Open Connectors

Built to integrate with the access control, video, and alarm systems running at every site.

Lifecycle & Audit

An append-only record of every incident, ready for security, HR, and board-level review.

Reporting & Analytics

Shift and incident reporting for your CSO, facilities, and executive leadership.

Visitor Management

Kiosk check-in, check-out and watchlist screening at every entrance — built for a campus that sees hundreds of guests a day.

See it running across your own portfolio.

Turn the page for a real scenario, audit readiness, and how to get started.

A day in the life

HQ REAR ENTRANCE — 9:52 PM

A rear-entrance door at headquarters is forced open at 9:52 PM, and the nearest camera detects movement four seconds later. Corvexa fuses the two events into one incident, classifies it as a **critical after-hours forced entry**, pulls the camera views automatically, and attaches the campus's SOP — notify security, verify identity on camera, alert the building's floor contact — before the alert ever reaches a phone. Security confirms a contractor left the door propped after a delivery and logs the resolution. The full record — every event, every action, every timestamp — is already in the audit trail for security leadership's file and the next board security briefing.

Audit & compliance support

Physical security controls increasingly show up in your own compliance story — SOC 2, ISO 27001, customer security questionnaires.

Exportable Audit Trail

Tamper-evident, append-only incident and event records, exportable by date range, with an integrity manifest, for your compliance team.

Consistent Incident Response

The same documented procedure every time — evidence of a real control, not just a policy.

Role-Based Access Control

Operator, supervisor & admin tiers ready to align with your existing IT and HR structure.

Multi-Site Consistency

One picture across headquarters, satellite offices, and newly acquired sites.

Software + Consulting

We don't just license a platform. We help you run it.

Site Assessment

Survey every building and build a portfolio-wide integration roadmap.

Systems Integration

Build connectors across every acquired system and facilities vendor.

SOP Design

Author response procedures with security, HR & facilities leadership.

Deployment & Training

Phased rollout across your portfolio, operators proficient from day one.
