FOR GOVERNMENT & PUBLIC SECTOR

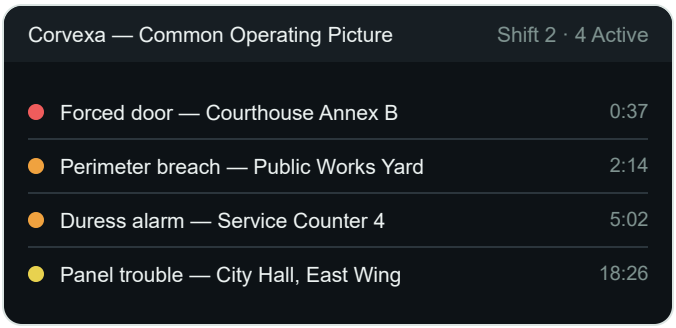

One picture. Every facility. Every department finally on the same page.

Corvexa correlates video, access control, intrusion, and life-safety systems across every facility you operate — courthouses, administrative buildings, public service centers — into a single real-time operating picture, with the right response procedure attached automatically.

Why public-sector security needs this

Most government security systems were bought building by building, budget cycle by budget cycle, from whichever vendor won that year's bid. The result: a dozen consoles, a dozen logins, and no consistent way to see what's actually happening across your jurisdiction.

- One operating picture across courthouses, administrative buildings, and service centers — not a console per building
- Consistent, documented response regardless of which facility, shift, or operator
- Built to integrate with the legacy systems you already have — no forced rip-and-replace ahead of a budget cycle
- A complete, exportable audit trail for oversight, accountability, and records requests

Built for multi-facility government operations

The same seven-capability platform, focused on what running dozens of public buildings actually requires.

Correlation & Classification

Badge, alarm, and camera events fused into one incident across any facility — severity assigned automatically.

SOP Workflow Engine

The same response procedure every time — whether it's the courthouse or the public works yard.

Unified Console

One queue for every building you operate — no more switching between a dozen legacy consoles.

Open Connectors

Built to integrate with the access control, video, and alarm systems installed across your facilities.

Lifecycle & Audit

An append-only record of every incident, ready for oversight, records requests, and after-action review.

Reporting & Analytics

Shift and incident reporting for department heads, safety committees, and oversight bodies.

Visitor Management

Kiosk check-in, check-out and watchlist screening at every public counter and service center entrance.

See it running across your own facilities.

Turn the page for a real scenario, procurement fit, and how to get started.

A day in the life

PUBLIC SERVICE COUNTER — 2:41 PM

A duress alarm activates at a public service counter after an escalating dispute with a visitor. Corvexa pulls the nearest camera automatically, classifies it as a **critical incident**, and attaches the facility's SOP — notify on-site security, alert the nearest law-enforcement liaison, and put “lock down adjacent doors” on the operator's checklist (Corvexa will lock them itself only if your site chooses to allow that) — before the alert ever reaches a radio. Security confirms the visitor left the building and the situation de-escalated without incident, and logs the resolution. The full record — every event, every action, every timestamp — is already in the audit trail, ready if the incident is ever referenced in an after-action review or a public records request.

Built for how government buys and operates

Public-sector security investments have to survive budget cycles, procurement rules, and public accountability — not just a single fiscal year.

Budget-Friendly Rollout

Facility by facility, fiscal year by fiscal year — without ripping out what still works.

Vendor-Neutral Integration

An open connector framework, not single-vendor lock-in across every facility.

Exportable Audit Records

Detailed logs to support oversight, after-action review, and records requests.

Role-Based Access Control

Operator, supervisor & admin tiers ready to align with your existing IT structure.

Software + Consulting

We don't just license a platform. We help you run it.

Site Assessment

Survey every facility and build a jurisdiction-wide integration roadmap.

Systems Integration

Build connectors across departments, vendors & your IT team.

SOP Design

Author response procedures with security & facilities leadership.

Deployment & Training

Phased rollout aligned to your budget cycle, not a forced cutover.
