FOR HOSPITALS & HEALTHCARE FACILITIES

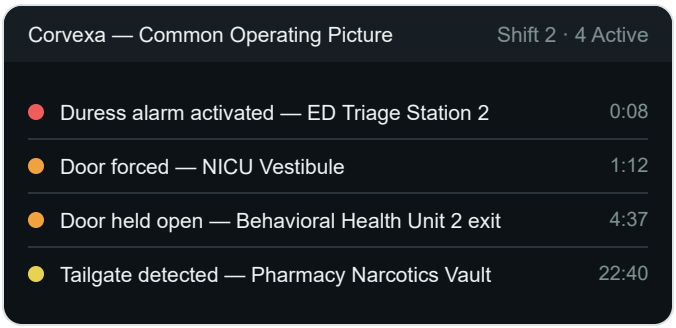

One picture. Every unit. Every patient and staff member accounted for.

Corvexa correlates video, access control, duress alarms, and life-safety systems into a single real-time operating picture — so security, facilities, and risk management see the same incident, with the right response procedure attached automatically.

Why hospitals need this

A hospital campus runs 24/7, welcomes thousands of visitors, and still has to keep the NICU, pharmacy, and behavioral health unit locked down. Your systems already see all of it — they just aren't talking to each other.

- Duress and panic alarms routed with the nearest camera attached — not handled in isolation
- Controlled-zone breaches at NICU, pharmacy, OR, and behavioral health classified and escalated automatically
- A documented, consistent response regardless of which shift or operator is on duty
- A complete, tamper-evident audit trail to support Joint Commission and risk-management review

Built for hospital operations

The same seven-capability platform, focused on what a hospital campus actually needs.

Correlation & Classification

Duress, badge, and camera events fused into one incident — severity assigned automatically.

SOP Workflow Engine

The right escalation path every time — charge nurse, security, facilities — not tribal knowledge.

Unified Console

One queue for the whole campus — main hospital, MOBs, garages — updating in real time.

Open Connectors

Built to integrate with the access control, video, and duress systems installed on your campus.

Lifecycle & Audit

An append-only record of every incident, built to support Joint Commission and risk-management review.

Reporting & Analytics

Shift and incident reporting your safety committee and nursing leadership actually ask for.

Visitor Management

Kiosk check-in, check-out and watchlist screening at every entrance — built for L&D, NICU, and behavioral health visitor policies.

See it running against your own campus.

Turn the page for a real scenario, regulatory readiness, and how to get started.

A day in the life

NICU VESTIBULE — 6:14 PM

The NICU vestibule door is forced open just after the unit's daytime schedule ends, and the hallway camera detects movement four seconds later. Corvexa fuses the two events into one incident, classifies it as a **critical after-hours forced entry**, pulls the nearest camera automatically, and attaches the unit's SOP — written with your clinical and security leadership, for example: notify the charge nurse, verify who is at the door, and put “lock down adjacent doors” on the operator's checklist (Corvexa will lock them itself only if your unit chooses to allow that) — before the alert ever reaches a phone. Security confirms a visiting physician used the wrong door and logs the resolution in under two minutes. The full record — every event, every action, every timestamp — is already in the audit trail for the unit's next Environment of Care survey.

Built to support regulatory & risk-management review

Security investment in a hospital has to hold up to more than an incident — it has to hold up to a survey.

Tamper-Evident Audit Trail

Hash-chained, append-only incident records with sealed resolutions, exportable for Environment of Care reviews.

Consistent WPV Response

Duress and panic events routed and escalated the same way, every shift.

Exportable Access Logs

Detailed records to support your compliance and privacy program.

Multi-Site Consistency

One picture across the main hospital, MOBs, and off-site clinics.

Software + Consulting

We don't just license a platform. We help you run it.

Site Assessment

Survey your campus without disrupting clinical operations.

Systems Integration

Build connectors for your access, video & duress systems.

SOP Design

Author escalation procedures with clinical & security leadership.

Deployment & Training

Phased rollout — never a live cutover during a shift change.
